

Hepburn Bio Degreaser does the job!

reduces costs and maintains your decks

HBC welcomes . . .

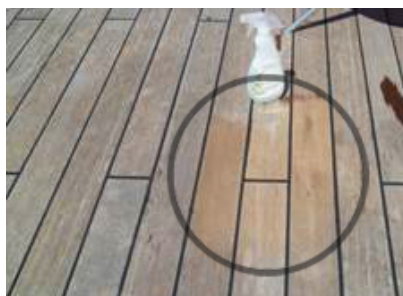

Hepburn Bio Care is proud to announce that Hepburn has been providing Transocean with pipe descaling and pipe maintenance products for 2 years. With great results reducing their treatment costs and protecting workers.

Will Hunter, Maintenance Supervisor on Transocean Legend says *“I think the selling point for most of them is clearing the black water lines. Using your product saved us some money as they were going to change all the black water lines out and after using the Bio Zapper and the Bio WCSC that was no longer necessary. I think the best bet would be the maintenance side of the corporation as they would see immediate benefits.”*

This winter AIDA, Carnival and Holland America tested Hepburn Bio Degreaser. Cleaning funnels, Bolidt, Api and teak. Proving that it effectively removes greasy food stains and oil residue without any damage, Hepburn Bio Degreaser is a concentrated degreaser and cleaner based on bio-degradable oils, penetrating and non-emulsifying agent. Quick split. This product has low toxicity, is non-flammable, non-corrosive, pH neutral, phosphate free and compatible with all OWS (Oily Water Separator).

Daniel Leibinger, Staff Captain C/S on AIDAaura says *“Thank you for the samples of the Bio degreaser you handed to us. The test we carried out, mainly with teak flooring, was very successful.”*

Teak deck currently cleaned by competitor's two part process

Before Bio Degreaser After Bio Degreaser

**No acids, no two part process just one phosphate free, pH neutral, cleaner
Hepburn Bio Degreaser
Simple, safe, non-flammable and non-corrosive.**

Hepburn product highlighted in Seatrade Cruise Review Magazine

Seatrade Cruise Review magazine has highlighted Hepburn Bio Care in their December 2011 issue.

Under the magazine section ‘Products & Services’ the article spoke about Hepburn launching its brand new product Bio Low Alkaline Cleaner, ideal for cleaning galley floors, deck tracks and heavily soiled areas. In October, the product was tested on wind turbine installation vessel MPI Resolution giving outstanding results.

After 4 weeks of the initial test MPI purchased Hepburn Bio Low Alkaline Cleaner, removing food residues, rubber marks, mud, silt, clay, soot and particulate soil.

Containing mild alkaline salts, low foam non-ionic surfactants, scale and corrosion inhibiting polymers, Bio Low Alkaline Cleaner is safe to use and will not damage surfaces.

Please contact us, we are sure we can help.
